# Use Case – Airport Customer Journey

In this use case, we will explore together how the check-in and boarding processes at an airport are perceived by passengers.

## CHECK-IN EXPERIENCE FROM A PASSENGER'S PERCEPTION – CUSTOMER JOURNEY MAP

The check-in and boarding process plays a pivotal role in shaping passenger satisfaction and comfort. Before deciding on any scope of the business transformation, business processes should be evaluated from the customer's perspective.

The IT department knows that there is room for improvement on the IT side. However, they are unsure whether the current airport services meet travelers' expectations. To clarify this, the Enterprise Design Team first adopted the EDGY Model and collected customer expectations for each customer-facing business process.

# Airports struggle to enhance the customer experience

- Airports are experiencing a widespread return in demand.
- Airports are growing technology investment more than any other area of the travel industry.
- Main objective: 56% 'enhancing the customer experience'
